Eriez' New HS-8 Hi-Speed Feeder Incorporates New Patented Tuning Technology

Erie, Pa.— Eriez® introduces the new [HS-8 Electromagnetic Vibratory Feeder](#) with quick stop and high conveying speed capabilities for improved efficiency in packaging, weighing, batching and bagging operations.

This state-of-the-art Vibratory Feeder is ideal for use in conjunction with many weigh scale and packaging machines. Original Equipment Manufacturers will appreciate Eriez' latest patented innovation in vibratory feeders: E-Z Tune™ technology. E-Z Tune enables customers who build their own trays to significantly reduce the time spent tuning feeders.

Eriez HS-8 features a low profile design for easy installation in areas where space is limited. The equipment's unique "wedge" shaped body allows feeder arrangement in small diameter weigh scale systems. Plus, HS-8's narrow width makes it well suited for in-line scales.

The innovative electromagnetic design of the HS-8 enables the system to operate virtually silently. Units are equipped with rubber isolators and a threaded insert for easy mounting. For added convenience, the HS-8 can be provided with all stainless steel hardware for wet environments.

Eriez is recognized as world authority in advanced technology for magnetic, vibratory and inspection applications. The company's magnetic lift and separation, metal detection, x-ray, materials feeding, screening, conveying and controlling equipment have application in the process, metalworking, packaging, plastics, recycling, mining, aggregate and textile industries. Eriez manufactures and markets these products through 12 international facilities located on six continents. For more information, call toll-free (888) 300-ERIEZ (3743) within the U.S. and Canada. For online users, visit www.eriez.com or send e-mail to eriez@eriez.com. Eriez World Headquarters is located at 2200 Asbury Road, Erie, PA 16506.
